

Toyota Forklift Parts

Toyota Forklift Part - In the United States, Toyota Materials Handling inc., or TMHU, has been the top selling lift truck provider since 1992. Proudly celebrating more than 40 years of operations, the Irvine, California based business offers an extensive line of quality lift trucks. Thanks to their reputation of superiority, reliability, and durability, Toyota remains prevalent in this competitive market. Quality is the cornerstone of Toyota's legendary Toyota Production System practiced at all manufacturing facilities, including TIEM, which is stands for Toyota Industrial Equipment Manufacturing, located in Columbus, Indiana. The bulk of the Toyota lift trucks sold in the U.S.A are built here.

All Toyota equipment and parts manufactured within North America adhere to the International Organization for Standardization or ISO 14001 standard. The Columbus TIEM plant has been honored on many occasions for its dedication to relentless progress and its environmentally friendly systems. It is the first and only manufacturer to offer EPA and CARB-certified Compressed Natural Gas powered lift trucks on the market. For example, the Toyota 8-Series IC lift trucks emit 70 percent fewer smog forming emissions than the current federal EPA standards and have complied with California's strict emission standards and regulations.

TMHU, U.S.A. - Leading the Industry

The president of Toyota Material Handling, U.S.A., Brett Wood believes that TMHU's achievement comes from its dedication to manufacture high quality lift vehicles at the same time as offering superb client assistance and service. "We must be able to learn and predict the needs of our customers," said Brett Wood. "As a leader, our success also depends on our ability to address our customers' operational, safety and environmental cost issues." TMHU's parent company, Toyota Industries Corporation, also known as TICO, is listed in Fortune Magazine as the world's biggest lift truck dealer and is amongst the magazines celebrated World's Most Admired Companies.

New Meaning to Environmental Accountability

Toyota's parent company, Toyota Industries Corporation, has imparted an excellent company philosophy towards environmental management within Toyota. Toyota's loaded history of environmental protection whilst retaining economic viability cannot be matched by other companies and certainly no other materials handling maker can yet rival Toyota. Environmental accountability is an important characteristic of corporate decision making at Toyota and they are proud to be the first and only producer to offer UL-listed, EPA - and CARB -certified Compressed Natural Gas powered lift vehicles. Yet one more reason they remain a leader within the industry.

In 2006, Toyota introduced the 8-Series line. The 8-Series signifies both Toyota's innovation and leadership in the industry. It features an exclusive emission system that surpasses Federal EPA emission principles, and also meets California's more intricate 2010 emission standards. The end invention is a lift truck that creates 70 percent fewer smog forming emissions than the present Federal standards tolerate.

What's more in 2006, Toyota developed an affiliation with the Arbor Day Foundation, furthering their obligation to the environment. In excess of 57,000 trees have been planted in community parks and national forests damaged by ecological reasons such as fires, as a result of this partnership. 10,500 seedlings have also been scattered through Toyota Industrial Equipment's network of dealers to non-profit organizations and neighborhood customers to help sustain communities all over the United States

Toyota's lift trucks provide superior productivity, visibility, ergonomics and durability, and most significantly, the industry's leading safety technology. The company's System of Active Stability, also referred to as "SAS", helps reduce the risk of mishaps and accidental injuries, in addition to increasing productivity levels while minimizing the likelihood of merchandise and equipment breakage.

System Active Stability senses numerous elements that may lead to lateral volatility and possible lateral overturn. When one of those conditions are detected, SAS instantly engages the Swing Lock Cylinder to steady the rear axle. This adjusts the lift truck's stability trajectory from triangular in shape to rectangular, providing a major increase in stability which substantially reduces the probability of an accident from a lateral overturn. The Active Mast Function Controller or the Active Control Rear Stabilizer also helps to avoid injuries or accidents while adding strength.

The SAS systems were initially adopted on the 7-Series internal combustion lift vehicles which were put on the market in 1999. These systems helped drive Toyota into the lead for industry safety standards. Now, SAS is adopted on virtually every new internal combustion products and is standard equipment for the new 8-Series. There are more than 100,000 SAS-equipped lift vehicles in action, exceeding 450 million hours combined. The increased population of SAS-equipped vehicles in the field, along with required operator education, overturn fatalities across all designs have decreased by 13.6% since 1999. Furthermore, there have been an overall 35.5% drop in industry wide collisions, loss of control, falls and tip overs from a lift vehicle for the same period.

Toyota's hardnosed values reach far beyond the technology itself. The company believes in providing extensive Operator Safety Training services to help clients satisfy and exceed OSHA standard 1910.178. Education courses, video tutorials and a variety of materials, covering a broad scope of matters-from personal safety, to OSHA policies, to surface and cargo conditions, are offered through the seller network.

Since the sale of its first lift vehicle in the U.S. to the manufacture of its 350,000th lift vehicle produced in 2009 at Toyota Industrial Equipment Manufacturing, TMHU has sustained a solid presence in the U.S. This fact is demonstrated by the statistic that 99% of Toyota lift trucks bought in America now are manufactured in the United States.

TMHU is situated in Columbus Indiana and houses nearly 1 million square feet of production facilities over 126 acres of property. Facilities include a National Customer Center, as well as production operations and supply centers for equipment and service parts, with the entire commitment exceeding \$113 million dollars.

The new NCC was designed to operate for TMHU customers and dealers. The facility includes a 360-degree showroom, a presentation theater complete with stadium seating for 32, an area for live merchandise demonstrations with seating capacity for 120; a presentation theater; Toyota's Hall of Fame showcasing Toyota's history since the birth of its originator, Sakichi Toyoda, in 1867, and lastly a education center.

TMHU has 68 sanctioned industrial equipment dealers, along with 189 dealership locations throughout the United States, offering the most comprehensive and inclusive client support and customer service in the industry. The company's new and Licensed Used lift trucks, service, components, and financing capabilities make Toyota dealerships a one-stop shop to guarantee total consumer satisfaction.
