

## Fork Positioner for Forklift

Forklift Fork Positioners - The fork positioner is actually a hydraulic device which could allow the the one driving to be able to work the forklift without leaving the seat. They are made out of high quality materials and are meant to be able to endure the most demanding procedures and work environments. Side shifting models have the added ability to laterally position the entire load or the arms in order to facilitate much more precise carrying and position in a quicker and much more effective method.

The only one of its kind blade pocket design can enable the one operating it to securely swing the unit's forks without any worry of damaging the positioning cylinders. This can allow the worker the alternative to either perform simultaneous or independent blade movement, dependent upon the job requirement. For most forklifts with non-OEM carriages, complete carriages are necessary. Standard OEM carriages can be converted into fork positioners on available units.
